

THE ROBERT MAPPLETHORPE FOUNDATION

HIV/AIDS GRANT PROPOSAL GUIDELINES

The Robert Mapplethorpe Foundation provides funding for scientific research directed towards the treatment or cure of AIDS and HIV-related infections. The Foundation also supports qualified HIV prevention and care-related programs. Prior funding of HIV-related work has encompassed the range of clinical HIV research, HIV care and treatment, and funding of equipment and facilities to allow for improved HIV research and care.

The Foundation seeks applications to fund proposals in the areas of HIV/AIDS research. Priority will be given to proposals that cannot be readily supported by larger external sources, e.g., NIH funding.

The Board makes funding decisions in the field of HIV/AIDS research in consultation with qualified outside experts. The Foundation is currently prioritizing proposals for projects benefiting and/or being conducted in the New York area.

If a project falls within the Foundation's Guidelines, applicants should provide in writing a cover letter, a project proposal (maximum of four pages), a proposed budget (limited to one page), and a Curriculum Vitae from the Principal Investigator, and Co-Investigators.

Please submit all pre-submission inquiries as well as final proposal materials via email to Joree Adilman: joree@mapplethorpe.org.
